🧑‍💻 Full Stack developer, 21 y.o.

🇦🇷 Buenos Aires, Argentina

📲 sebipaps@gmail.com (+54) 11 24080126

About

Fullstack developer specialized in frontend of web applications.
I like building apps in a general sense, using code as a means to an end (building product).

Education

Mar 2020 - Sep 2022 (40%)
UTN, Buenos Aires - *Systems Engineer (like C.S.)*
Computer science + management. Built an OS and compiler from the ground up in C, algo+data structures in C++, programming paradigms like functional, objects and logic.

Experience

Feb 2022 - Mar 2023 (14 months)
Pluggy YC S21, São Paulo (remote) - *Full Stack developer*

Focus: building tools to reduce the time our clients take to launch to production.

- Maintaining and improving main application (10K monthly users) similar to plaid link, widget used to connect bank accounts with applications (data driven, track + analyze to make decisions). check it out
- Building and owning Pluggy's Dashboard from a very early stage, both frontend and backend of the application.
- Support clients having issues implementing our product. Contact with clients for improvements and bugs.
- Built a no-code tool to implement our product from the ground up with a colleague, used now by 20 clients.
- General involvement in almost all engineering projects (maintaining SDKs, documentation, landing page, quick fixes in APIs and other components of the backend)
- Worked on the ui library used internally across all our products.
- Hackathon projects: Whatsapp bot that implemented Pluggy connect (with a coworker) and a new connector for a crypto exchange done from the ground up (by myself, included reverse engineering in exchange mobile app)

Skills

- **General**: Typescript, deploying w/ Vercel, tracking and analytics w/ Segment + Amplitude & Metabase. Familiar with linux command line.
- **Frontend**: React, Next, Redux, auth0.
- **Backend**: Node + Express + Sequelize, DB: familiar with SQL, worked with Postgres+supabase, deployment: AWS lambda, Vercel functions, SST.
- Native Spanish, fluent English, basic Portuguese.

Personal Projects

(more on my personal site)

- AutoTrader: marketplace to buy and sell cars
    NodeJS-express, MongoDB-mongoose, React, Bootstrap
- Open Ticket: create ticketing for events
